

Instruction -

- Write code in Python and share .ipynb file.
- Add proper comments to make the solution self-explanatory.
- Before submitting the solution, pls make sure that the below-mentioned features are in working condition.

Problem statement:

Develop an item checkout application. Below are some of the features of the application;

1. Be able to add items into the cart
2. Be able to remove items from the cart
3. Checkout feature (show total amount to pay)
4. View all items in cart
5. Write unit tests
6. Items supported are (i.e., to build a Cart, we need items to place in the cart. Eligible items, their prices and quantity in stock are listed in this section):
 - Orange: price \$3 per piece, available quantity 80
 - Banana: price \$2 per piece, available quantity 99
 - Watermelon: price \$5 per piece, available quantity 50
