

Senior Prompt Engineer

Location: Remote Work Schedule: Core hours 10 AM - 7 PM Amsterdam time Position Type: Full-time

Salary: \$1200-\$2200 based on experience

About Us

We are a leading provider of AI-driven content solutions, specializing in creating high-quality, optimized content through advanced AI technologies. Our platform leverages cutting-edge language models and diffusion models to deliver innovative content solutions for businesses worldwide.

Position Overview

We're seeking an experienced Prompt Engineer to join our team and lead our prompt optimization efforts across multiple AI platforms and frameworks. The ideal candidate will combine technical expertise in prompt engineering with a deep understanding of content creation, model fine-tuning, and AI agent frameworks.

Key Responsibilities

- Design, develop, and optimize prompts for various Large Language Models (LLMs) including GPT-4, Claude 3.5 Sonnet, and other state-of-the-art models
- Create and refine prompts for image generation using diffusion models such as Flux, Ideogram, and similar platforms
- Develop comprehensive datasets for model fine-tuning, including creating exemplar content with specific readability levels and stylistic requirements
- Design and implement prompt strategies for AI agent frameworks like CrewAI and LangSmith
- Conduct systematic testing and optimization of prompts to ensure consistent, high-quality outputs
- Create documentation and guidelines for prompt engineering best practices
- Collaborate with content teams to understand requirements and develop targeted prompt solutions
- Monitor and analyze prompt performance metrics to drive continuous improvement
- Train and mentor team members on prompt engineering techniques

Required Skills and Experience

- 3+ years of experience in prompt engineering or related field
- Demonstrated expertise in crafting and optimizing prompts for major LLMs (GPT-4, Claude, etc.)
- Proven experience with image generation models and prompt optimization for visual content
- Strong background in dataset creation and curation for AI model fine-tuning
- Hands-on experience with AI agent frameworks (CrewAI, LangSmith, etc.)
- Experience with prompt versioning and performance tracking
- Strong analytical skills and attention to detail
- Excellent communication skills and ability to document complex prompt engineering strategies
- Understanding of content readability metrics and SEO principles

Technical Requirements

- Proficiency in Python and relevant data processing libraries
- Experience with prompt management and versioning tools
- Familiarity with AI model evaluation metrics and testing methodologies
- Knowledge of dataset preparation and cleaning techniques
- Understanding of model fine-tuning processes and requirements

Preferred Qualifications

- Experience with A/B testing prompts and analyzing results
- Background in content creation or editorial work
- Knowledge of multiple languages for multilingual prompt optimization
- Experience with prompt chaining and complex prompt architectures
- Familiarity with semantic search and embedding technologies

Project Examples Required in Application

Candidates must provide examples of:

1. Optimized prompts for different LLMs and their comparative results
2. Image generation prompts and resulting outputs
3. Dataset creation projects for model fine-tuning
4. Implementation of AI agents using frameworks like CrewAI
5. Documentation of prompt optimization processes

Application Requirements

Please submit:

- Detailed resume highlighting relevant prompt engineering experience
- Portfolio of prompt engineering projects with measurable results
- Examples of datasets created for model fine-tuning
- Case studies of successful prompt optimization initiatives
- Cover letter explaining your approach to prompt engineering and vision for its future

Benefits

- Competitive salary based on experience
- Remote work flexibility
- Professional development opportunities
- Access to cutting-edge AI technologies
- Collaborative and innovative work environment
- Health insurance and retirement benefits
- Annual learning and development budget

Additional Information

- Regular team meetings and collaborative sessions
- Opportunities for advancement as the team grows
- Active participation in shaping our AI strategy
- Continuous learning environment with access to latest AI developments

We are looking for someone who can hit the ground running and contribute to our team's success from day one. If you are passionate about prompt engineering and have a track record of creating effective, innovative solutions, we want to hear from you.

Note: Only complete applications with all required components will be considered. Please ensure your portfolio clearly demonstrates your expertise in all key areas mentioned in the requirements.
